

Recycle your dog's waste and reuse the end product to benefit your garden.

The Doggy do dispenser is a very simple, mobile worm farm to place directly in your garden. Dispensers are a recycled product, made from wheelie bins* beyond repair, or an old discarded white builder's bucket with the bottom cut out.

Dispensers are very simple to use, as follows:

- Place dispenser directly in your garden in a shaded area, i.e. next to a flower bed, by a tree or against the back fence, and push a few centimetres in to the soil.
- Add worms and castings and wet shredded paper.
- Drop in your dog's waste. Cover with carpet or thick paper.
- Add more shredded paper that has been wet once a week (to provide cover for worms to attack waste efficiently).
- Add a little water to dispenser once a week to maintain moist conditions.
- Worms convert waste to fertiliser, for instant take-up by plants.
- Move dispenser and worms (contained in the first few centimetres of soil) to a new patch when dispenser becomes full. Spread remaining castings out under tree and cover with mulch.
- If you have just wormed your dog, keep poo out of the bin for about 3 days. Medication has the same effect on compost worms.
- Don't be tempted to give worms' kitchen scraps as well, as they will eat the scraps and leave the poo (as you would!).
- Keep water bucket and tongs next to bin for easy access when disposing of poo.
